Subject: Guidelines & Expectations to Prospective MPhil Students

Dear Prospective MPhil Students,

If you are considering joining my research group, here are a few key expectations and working norms I'd like to share to ensure a beneficial and gratifying experience for everyone involved.

1. **Personal Mentorship:** I deeply value the mentor-student relationship, which allows for tailored guidance and comprehensive support. As a result, I consciously limit the number of students I mentor each year to ensure that every individual receives ample attention, promoting their personal and academic growth.

2. **Training Focus:** My primary interest currently lies in advancing research in our field. As such, students in my group are expected to dedicate the majority of their time to investigating cutting-edge research topics. Exceptions to these who have solid programming skills and are willing to develop applications based on foundation models.

3. **Study Outputs:** I expect all my students to have tangible research outputs before their graduation. This typically manifests in the form of published papers and similar achievements. As such, please consider your willingness and dedication to contribute to research before deciding to join my group.

4. **Mutual Understanding:** I value establishing a common understanding and shared interests before any formal commitment is made. It is important to ensure that we align in terms of research interests and work ethics. Therefore, I encourage you not to rush the process of asking me to be your supervisor.

Thank you for taking the time to consider these points thoughtfully. I truly believe in the potential of each student, and I look forward to collaborating with those who demonstrate a strong commitment to advancing our collective knowledge through rigorous research.

Best regards,

Hao Liu
Assistant Professor
Thrust of Artificial Intelligence
Hong Kong University of Science and Technology (Guangzhou)
